DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Nelson et. al., US Patent Application Publication No. US 2005/0111845A1.

Nelson et. al. 845' teaches (Figs.1-7) a method and apparatus for providing a data path through a Small Form Factor Pluggable transceiver comprising: a transceiver module 2000,200 including a plurality of single ended pins (Note that pins for data, clock signals, ect. are not shown in the figures but are considered to be inherent to the transceiver module) wherein a control module 2105 used with

coded/clocked/data/ (loss of signal)/disable..(ect.) signaling means 2105A, 2105B (can be used in conjunction with a memory ROM means 2106, 2112 for determining as to whether a high or low data rate speed is necessary according to the needs of an external host 2002 (See diagram of Fig. 7) so that external optical fibers 2110A, 2110B can be set to various Gigabit Ethernet speeds (Note that the device and method of Nelson et. al. can either be used with a SERDES or the SERDES can be bypassed or eliminated; See paragraph 37) and the device and method of Nelson can be used with a wide variety of standardized industry standard speeds T1, T3, E1, E3..ect. The method and apparatus of Nelson et. al. 845' clearly, fully meets Applicant's claimed limitations.

A copy of PTO-1449 will be included in this office action.

The following references are also cited by the Examiner as being pertinent prior and/or related art: Hidai et. al., U.S.P. No. 7,107,414 (Figs.1-10), Popovic et. al., U.S. Patent Application Publication No. US 2005/0196119A1 (Figs.1-4), Aronson, U.S.P. No. 7,204,648 (Figs.1-9), Murr et. al., U.S.P. No. 6,872,094 (Figs.1-10), Gilliland et. al., U.S. Patent Application Publication No. US 2002/0181895A1 (Figs.1-6) and Sheth et. al., US 2004/0033079A1 (Figs.1-8).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian M. Healy whose telephone number is (571)272-2347. The examiner can normally be reached on Compressed schedule Mon-Fri. 6AM-5PM.
